

Reaching For English

Abstract

This project is specific to the country Nicaragua. We are developing an app for the people of this country to learn English. This app will serve as a learning tool to assist the people in everyday life for work and trade. With this app they are able to take lessons in English

Phase 1

- Backend: developing database system to hold grades, topics, lessons, and audio files.
- Setting privileges for the database system to prevent malicious activity.

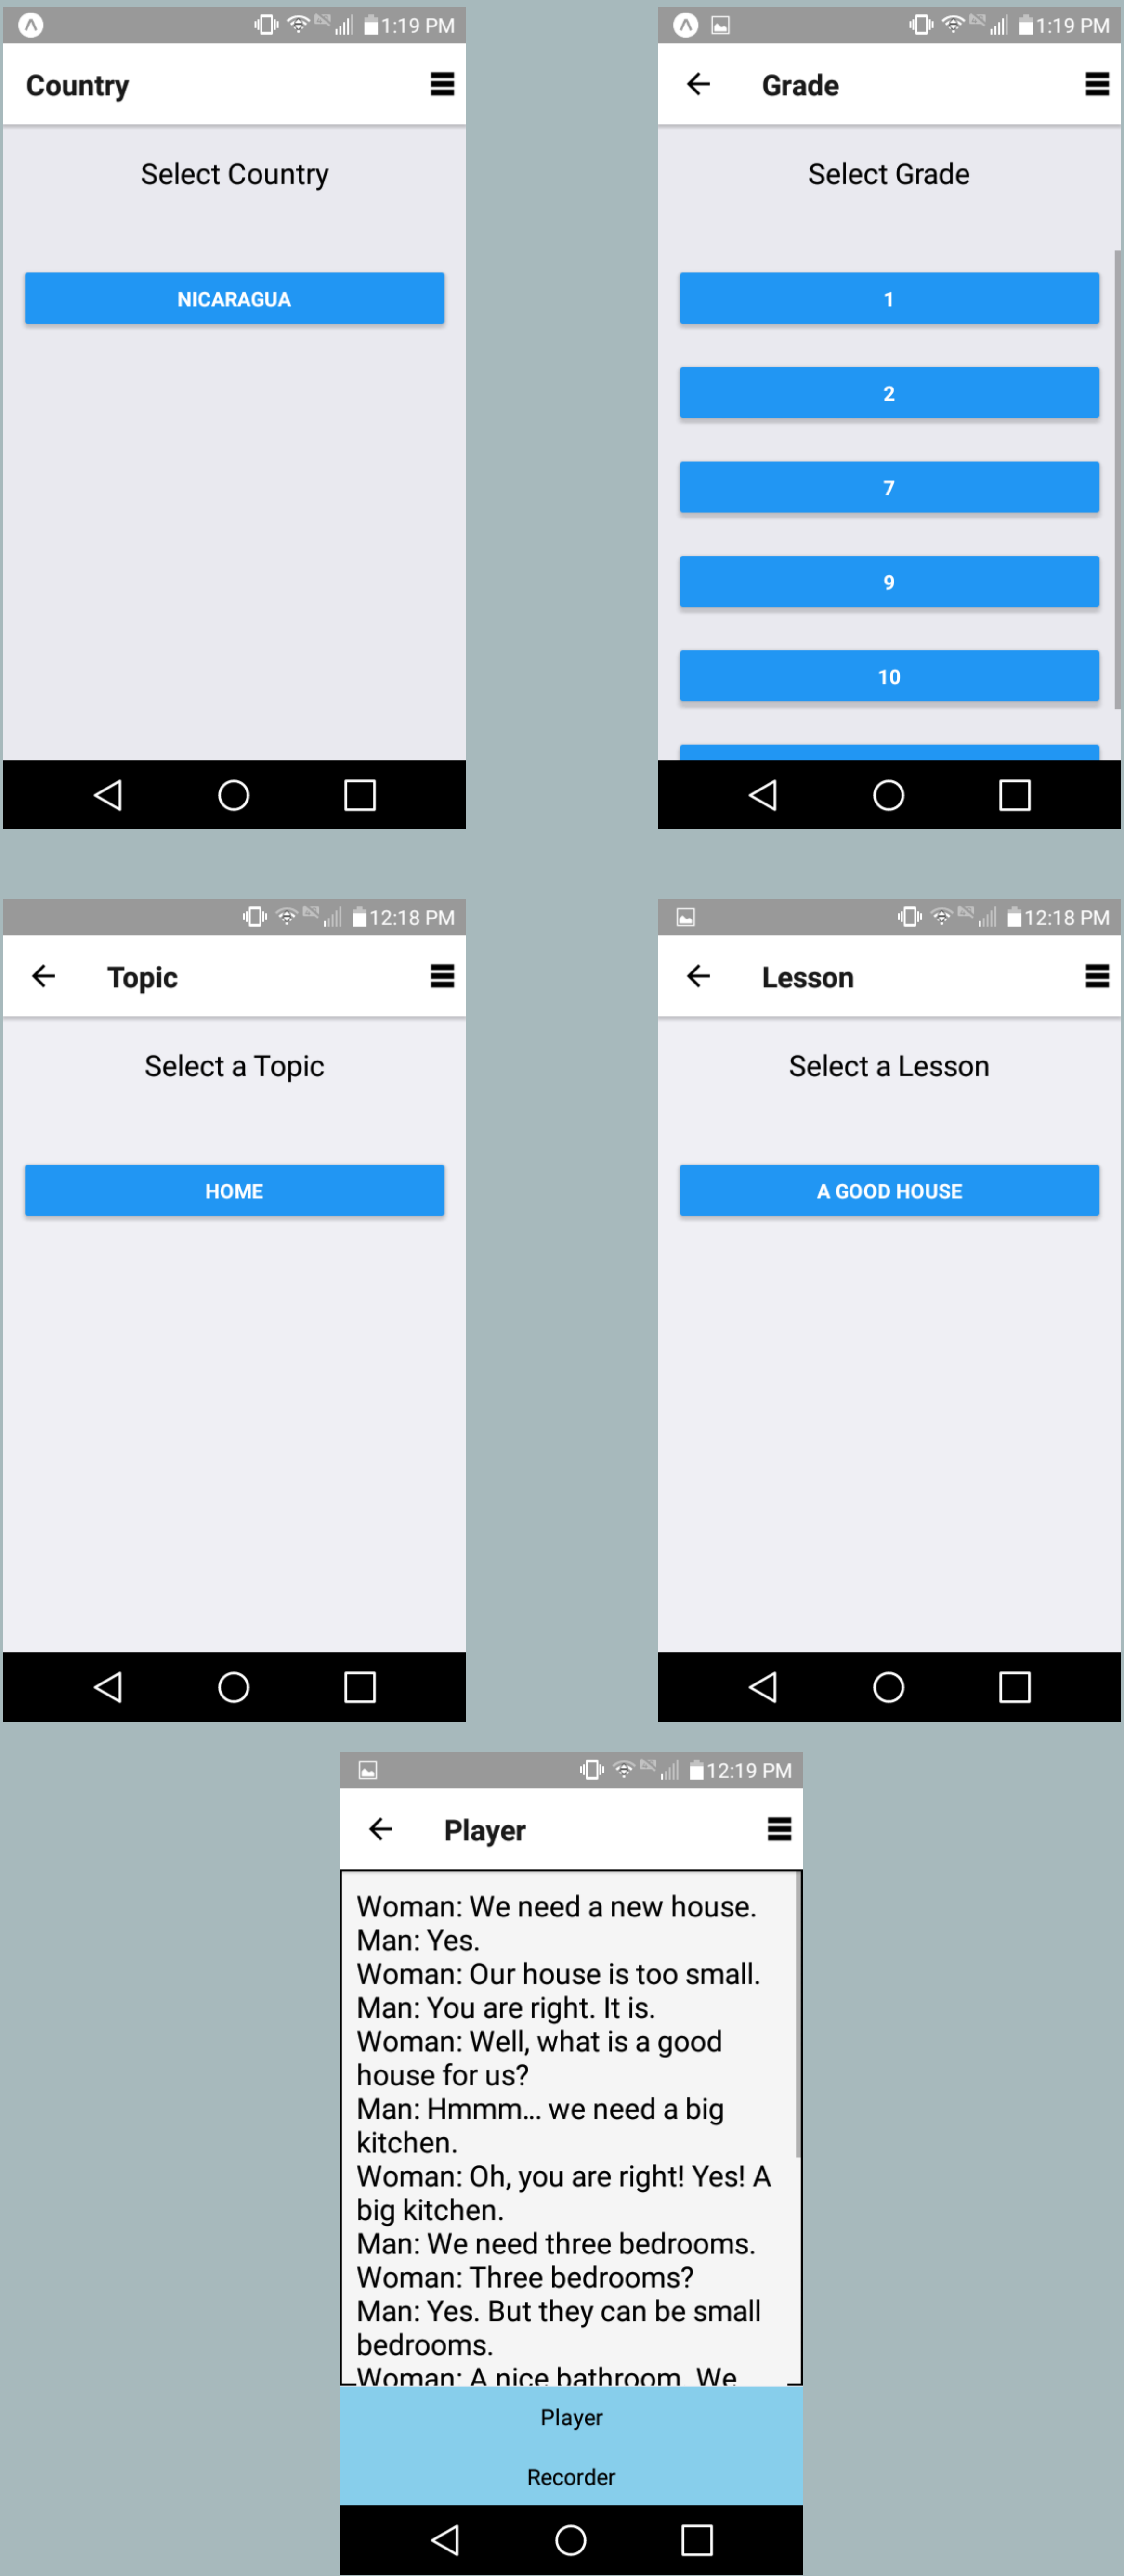

Phase 2

- Building connectivity to the database using PHP.
- Building functionality to retrieve and post data to the database.
- Develop admin functionality to interact with the database to add/remove data.

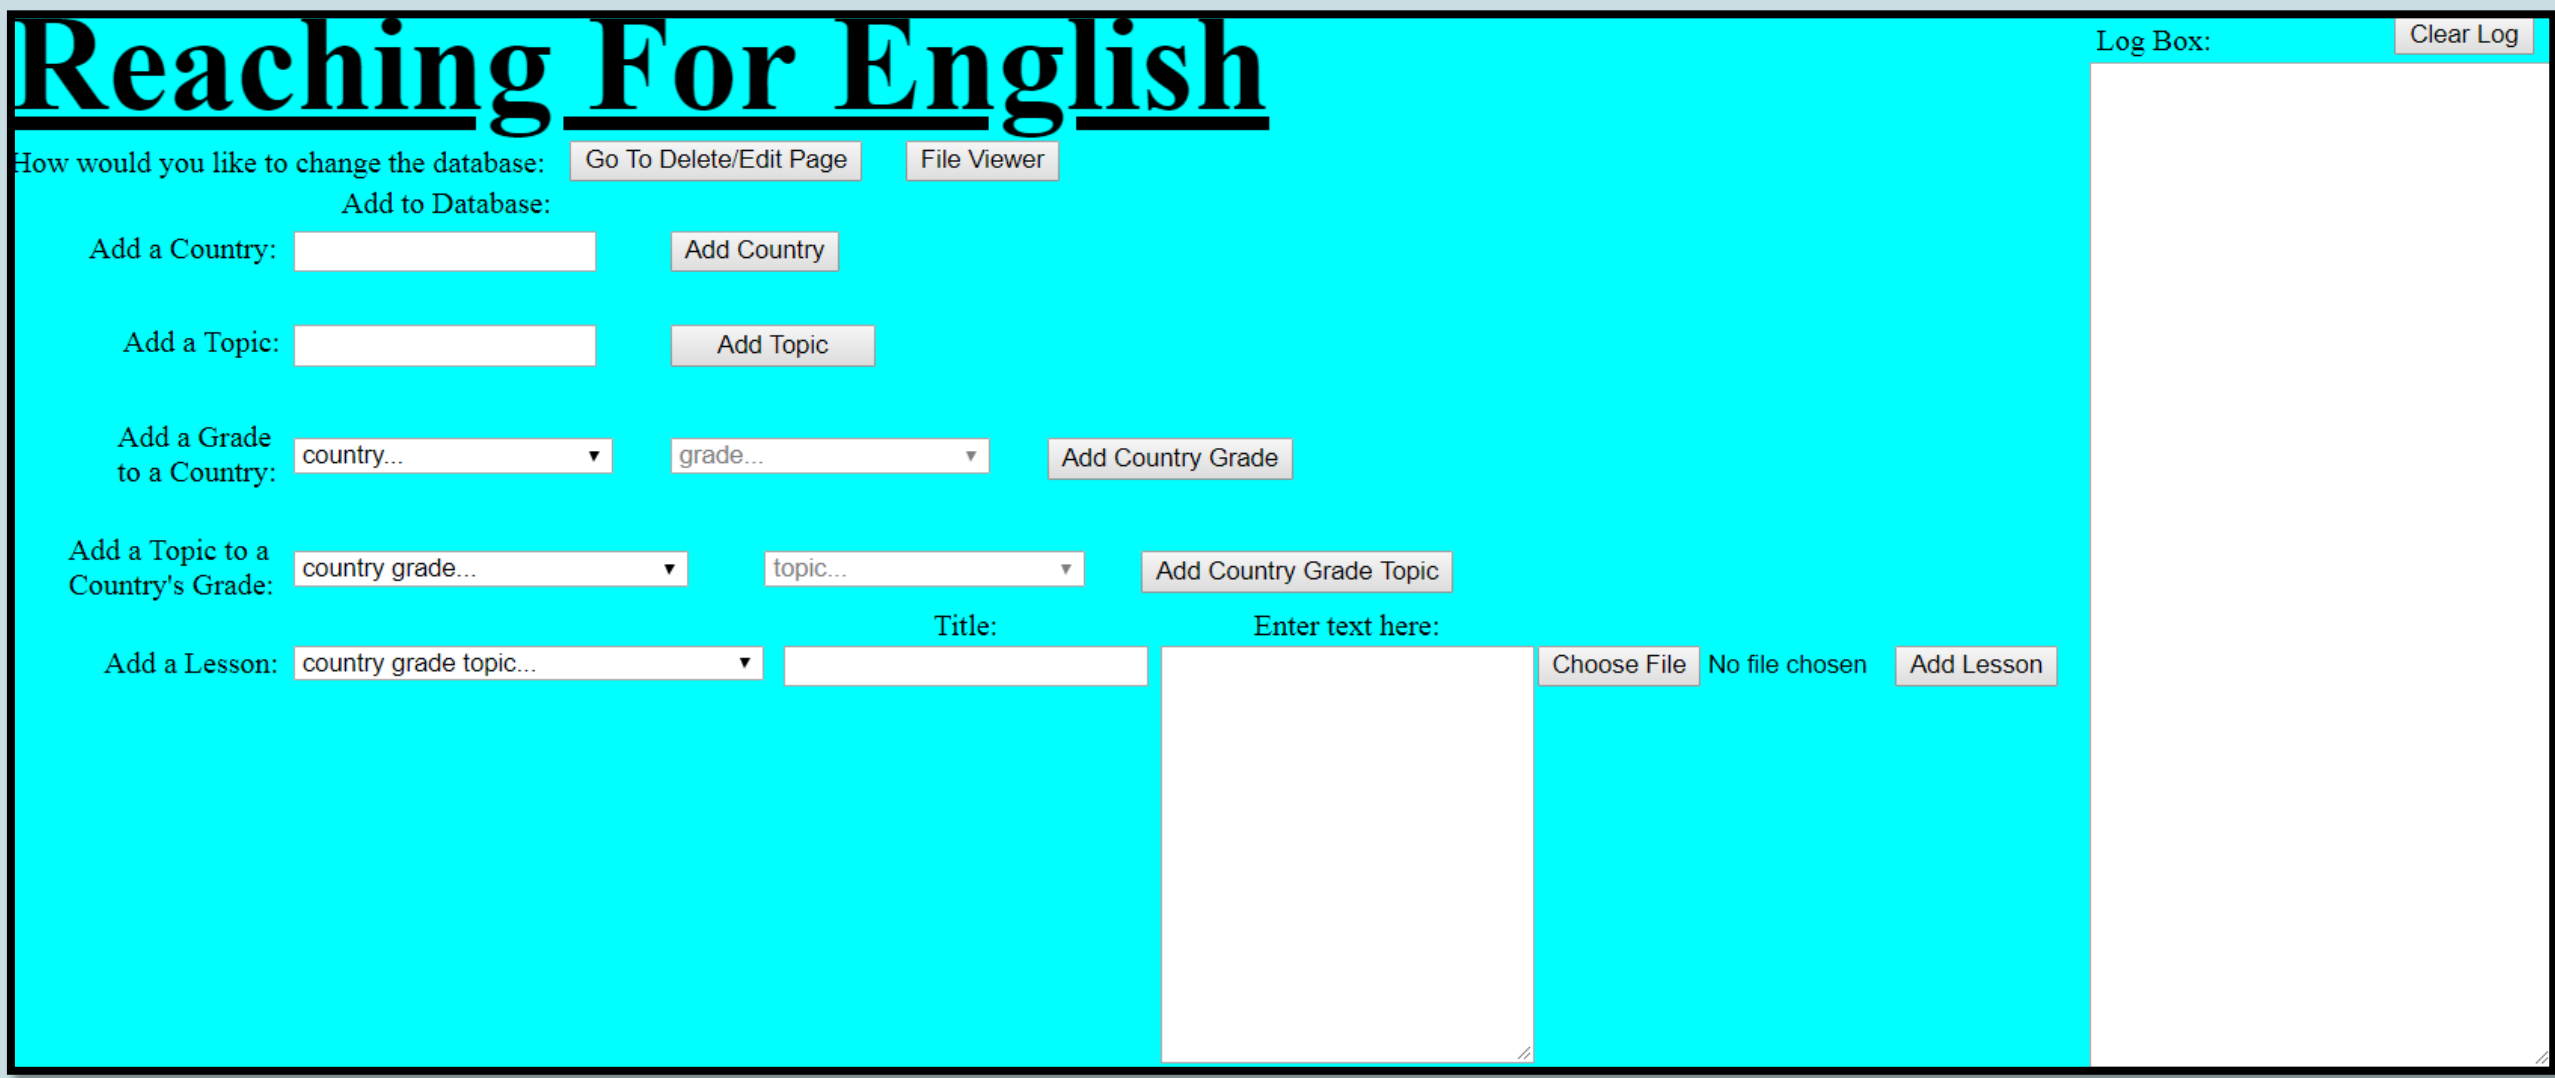

Phase 3

- Using react native to simultaneously develop the front-end for IOS and Android for the default user.

App

Website

- Page for Adding Content

- Page for Deleting/Editing content
